

Wireless Networking Products for Macintosh

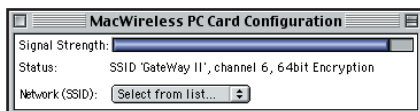

After 10 years of supplying technology to Macintosh networking companies, **MacWireless** brings its complete lineup of Airport and Wi-Fi (802.11b) compatible wireless products directly to the Macintosh community. PC Card, PCI, and USB products cover virtually all Macintosh models new and old.

MacWireless delivers mature, high quality products at affordable prices. 

Our 802.11b products have the following common features:

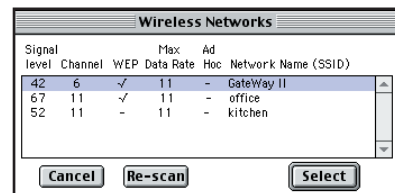

- ➔ Easy to install and operate Macintosh look and feel
- ➔ 11 Mbps maximum performance up to 150 feet
- ➔ 64-bit and 128-bit hardware-based WEP encryption
- ➔ Apple Airport compatible including support for Airport Passwords
- ➔ IEEE 802.11b Wi-Fi Compatible

Great User Interface:

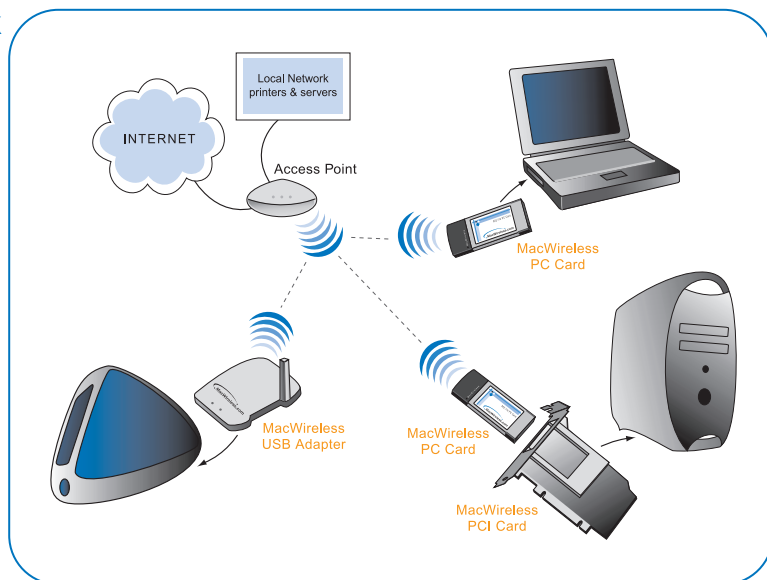

The control panel's Configuration, Information, and Statistics windows display a wealth of important network data, or none at all if you prefer.

Select From List popup menu displays Wireless Networks window with detailed data about all Access Points and Ad-Hoc networks in your vicinity.
